

FOR IMMEDIATE RELEASE: 30th AUGUST 2016

The Newton Waterproofing App Launches on Google Play for Android

The leading independent supplier builds on its App Store launch and expands its app presence onto Android

Tonbridge, Kent: Following on from the successful launch of its Newton Waterproofing App on the [Apple App Store](#) platform in May 2016, [Newton Waterproofing Systems](#) have been working hard to expand upon and cement their first-mover status by immediately preparing the app for the [Google Play](#) store on the [Android](#) platform. The new and improved version of the app still provides complete structural waterproofing and damp proofing solutions through detailed product information, images, technical drawings and existing case studies, but also puts Newton's library of educational and product application videos at the immediate disposal of the user through either their smartphone or tablet.

As one of the two major operating systems that rule the smartphone industry, it was clearly important for Newton's fledgling application to obtain a presence on a platform that accounts for such a huge proportion of global smartphone users. Replicating the existing functionality, the Android version of the Newton app provides complete technical documentation for all of Newton's products, more than 200 of Newton's most popular sections and details, and a wide selection of the company's most prestigious case studies by their nationwide network of Specialist Contractors. Furthermore, the app now provides users with the ability to view the entire range of Newton's specialist videos through their [YouTube](#) channel.

Newton Managing Director Warren Muschialli, is excited about the new development, "With the launch of the new app it was important to not simply rest on our laurels, but to keep working hard to improve the capability and availability of the app itself, as well as the services that it offers to its users. Although it had a pretty great basis from which to start, the introduction of the video functionality will make it even easier for contractors, architects and specifiers to view and judge which products are best suited to their particular requirements."

As always, the Newton app is completely free, and once downloaded its entire contents are available offline, meaning that even in the most awkward locations, the required technical information will always be at hand. The only exception to this is the Newton Videos, which will require a WiFi or wireless internet connection. The Search, History and Bookmark functionalities however, still ensure that this wealth of information is easily navigable for all users. Download the Newton Waterproofing App today from either the [Apple App Store](#), or [Google Play](#) for [Android](#) devices.

About Newton: [Newton Waterproofing Systems](#) has been a market leader in the UK waterproofing and damp proofing market since its inception in 1848. Today, the still independently owned company is based in Tonbridge, Kent, and provides complete structural waterproofing and damp proofing solutions for both new and existing buildings, with previous projects ranging from the Houses of Parliament and the Royal Courts of Justice, to the new Manchester United Hotel Football at Old Trafford.
